## Safe use

Please read this guide carefully. Please note that diagrams are for illustrative purposes only.
heck that all components are onsite, undamaged and that they are functioning correctly - (refer to Checklist and Quantity Schedules in the user guide). Damaged or incorrect components should not be used.
Check ground on which tower is to be erected and moved is capable of supporting the tower.
The safe working load is 275 kgs ( 606 lbs ), per platform level, uniformly distributed up to a maximum of 950 kgs ( 2100 lbs ), per tower (including self-weight).
Beware of horizontal forces (e.g. power tools) which could generate instability. Maximum horizontal force equals 30 kg .
Towers must only ever be climbed from the inside and using the rungs directly below the trapdoor.
it is recomme
Only use the adjustable legs to level the tower and not to gain extra height. Adjustable legs should only ever be extended to minimum amount required to leve the tower.
Lifting of equipment
Tower components should be lifted using a reliable lifting material (e.g. strong rope employing a reliable knot (e.g. clove hitch), to ensure safe fastening and always lift within the footprint of the tower.
Ensure the safe working load of the supporting decks and the tower structure is not exceeded.

Movement
The tower should only be moved by manual effort, and only from the base.
No person or materials should be on the tower during movement.
Caution should be exercised when wheeling a tower over rough, uneven or sloping ground, taking care to unlock and lock castors. If stabilisers are fitted, they should The overall height of the tower when being moved, should not exceed 2.5 times the minimum base dimensions, or 4 metres overall height with stabilisers fitted in the correct position (whichever is the smallest). If stabilisers are not fitted in the standard position, the overall height of the tower should not exceed 2 m .
Before use, check the tower is still correct and complete.
After every movement of the tower use a spirit level to check that it is vertical and level to within $10 \mathrm{~mm} / \mathrm{m}$ and set the adjustable legs as required.
Do not move the tower in wind speeds over 7.7 metres per second ( 17 mph ) Mobile access towers are not designed to be lifted or suspended.

NOTE: If the tower is moved, you MUST inspect prior to use.
Ties
For further information on tying-in a tower please contact your supplier or the manufacturer.

Maintenance - storage - transport
All components and their parts should be regularly inspected to identify damage, particularly to joints. Lost or broken parts should be replaced, and any tubing with indentation greater than 5 mm must not be used.

PRE-USE SAFETY CHECKLIST

| Refer to this checklist before using each time. |  |
| :--- | :--- |
| Description | Yes |
| Tower structure upright and level |  |
| Castors locked and legs correctly adjusted |  |
| Horizontal and diagonal braces fitted |  |
| Stabilisers and props fitted as specified |  |
| Platforms located and wind-locks engaged |  |
| Interlock clips engaged |  |
| Toe boards located |  |
| Guardrails fitted correctly and positively locked |  |
| Tower designation information kit fitted |  |

Ensure horizontal braces and guardrails are fitted correctly Always fit as shown.

Ensure wind-locks are engaged before moving onto the deck levels.

## CLIMA 3T

Mobile Aluminium Tower with Climbing Frame 850/1450
3T - Through the Trapdoor Method

## COMPONENTS

## FITTING TOE BDARDS

| Always start building with the smallest height frames at the base of the tower: 850 towers: |  | Where all three frame heights are used in a tower, start with 4 rung frames at the base, with the 6 rung frames next and the 8 rung frames on the top. Refer to the Quantity Schedules for detail. <br> The procedure illustrated shows 4.2 m platform height tower starting with a 4 rung frame. |
| :---: | :---: | :---: |
| Platform height in metres | Frame at base |  |
| 1.7, 2.2, 3.7, 4.2, 5.7, 6.2, 7.7, 8.2, 9.7, 10.2, 11.7, 12.2 | 4 rung |  |
| 2.7, 4.7, 6.7, 8.7, 10.7 | 6 rung |  |
| 1.2, 3.2, 5.2, 7.2, 9.2, 11.2 | 8 rung |  |
| 1450 towers: |  | BoSS Towers. Above 4 m height, it is essential that |
| Platform height in metres | Frame at base | from the inside. |
| 1.7, 2.2, 3.7. 4.2, 5.7, 6.2, 7.7, 8.2, 9.7, 10.2, 11.7, 12.2 | 4 rung |  |
| 2.7, 4.7, 6.7, 8.7, 10.7 | 6 rung |  |
| 1.2, 3.2, 5.2, 7.2, 9.2, 11.2 | 8 rung |  |

## ASSEMBLY PROCEDURE

 Assembly for 850 towersInsert adjustable leg/castor assemblies into end frames and lock the castors. Base plates can be fitted to the adjustable legs if it is not necessary to move the tower. Fit two horizontal braces to the 850 end frames as shown in Steps 2 and 3 for the 1450 tower procedure. Ensure that the frames are vertical and level by checking with a spirit level and setting the adjustable legs required.

Fit a trapdoor deck on the 4th rung. Fix the horizontal braces (red) as guardrails on the 6th and 8 th rungs ( 2 and 4 rungs above the plafform) on both sides of the tower.

DISMANTLINE PROCEDURE

To take down the tower, reverse the building sequence. When removing guardrail braces, unlock the four claws furthest from the trapdoor and return immediately to the protected position within the trapdoor. You may then unlock the claws at the other ends of the guardrails to remove them from the tower.

## ASSEMBLY PROCEDURE

 Assembly for 1450 towersFit two diagonal braces (blue) in opposing directions between the 2nd and 6 th rungs. Ensure the frames are vertical and level by checking with a spirit level and setting the adjustable legs as necessary. Fit the next pair of end frames and check the frame interlock clips are engaged. Fit stabilisers.
Push four castors onto four adjustable legs. Insert adjustable legs into two end frames as shown. Lock castor brakes Base plates can be fitted to adjustable legs if it is not necessary to move the tower
Fit one horizontal brace (red) onto the vertical of an en frame, just above the bottom rung, with the claw facing outwards
Note: All locking claws must be opening before fitting

During use
Beware of high winds in exposed, gusty or medium breeze conditions. We recommend that in wind speeds over 7.7 metres per second ( 17 mph ), cease working on the tower and do not attempt to move it. If the wind becomes a strong breeze, (expected to reach 11.3 metres per second - 25 mph ) tie the tower to a rigid structure. If the wind is likely to reach gale force, (over 18 metres per second - 40 mph ) the tower

## .

Wind description
Medium breeze
Strong breeze
Gale force
Beaufort scale
Beaufort no. Speed in mph Speed in $\mathrm{m} / \mathrm{sec}$

Walking is difficult
Raising and lowering components, tools, and/or materials by rope should be conducted within the tower base Ensure that the safe working load of the supporting decks and the tower structure is not exceeded.
The assembled tower is a working platform and should not be used as a means of access or egress to other structures. Beware of horizontal forces (e.g. power tools) which could generate instability. Maximum horizontal force 30 kg .
The stairway towers, featuring an inclined staircase access, are for frequent use by personnel carrying tools and/or materials. Do not use boxes or stepladders or other objects on the platform to gain extra height.

Fit two pairs of diagonal braces in opposing directions between the 6th and 10th rungs and the 10th and 14th rungs. Locate trapdoor deck on the 12 th rung

Climb up the inside of the tower and from the protected position of the trapdoor, fit horizonta braces as guardrails (on both sides) to the 14th and 16 th rungs ( 2 and 4 rungs above the platform in that order).

Continue the procedure until the required working height is reached, adding additional pairs of end frames, diagonal braces and fitting trapdoor platforms, as shown on previous steps. At every platform level, add horizontal braces as guardrails at 2 and 4 rungs above the platform (in that order) on both sides of the platform (as shown in Step 5).

Fit these guardrail braces from the protected trapdoor position. Do t climb onto the platform until all guardrails are in place. At the fin evel, a further diagonal brace should be added on one side of the tower as shown.

Fit the toe boards - see the components section for guidance on how to fit. The tower is now complete.

Position the second end frame as shown and at the other end of the horizontal brace onto the vertical, just above the bottom rung. Fit a second horizontal brace between the bottom rungs on the other side of the frames to square the tower.
Fit two additional end frames and check that the frame interlock clips are engaged. Fit two diagonal braces (blue) in opposing directions between the 2nd and the 6th rungs. Ensure the frames are vertical and level by checking with a spirit level and setting the adjustable legs as required.

IMPORTANT - Only use the adjustable legs to level the tower and not to gain extra height.

 the tower as shown positioned with the hinges towards the outside of inside of the tower and from within the prowad trapdor position fit horizontal braces on the 10th and 12th rungs (in that order) on both sides of the deck.

Do not climb onto the deck until all guardrails are in place.
When horizontal braces are fitted as guardrails, they should be 0.5 m and 1.0 m ( 2 and 4 rungs) above the deck level. Remove the temporary deck from the lowest rung.

 Fit the next pair o diagonal braces in opposing directions between the 6th and 10th rungs add two additional end frames.

Add two more diagonal braces between the 10th and 14th Add two more diagonal braces between the 10th and 14th rungs. If finishing at this height ( 4.2 m platorm), the fixed deck should be repositioned to the 16 th rung on the opposite side of the hinges towards the outside of the tower and the trapdoor in line with the one below. Climb the tower and from the protected trapdoor with the one below. Climb the tower and from the protected trapdoor postion, fit the horizontal braces as
guardrails on both sides at 2 and 4 rungs ( 0.5 and 1.0 m ) above the platform level. At the final level, a further diagonal brace should be added on one side of the tower as shown.

## When building beyond a 4.2 m platform height

Continue to add pairs of end frames, diagonal braces and fit trapdoor decks as shown in the previous steps. At every plafform level, add horizontal braces as guardrails at 2 and 4 rungs above the plafform. Fit these guardrail braces from the protected apdoor position. Do not climb onto the plafform until all guardrails are in place.
Continue until the required height is Continue until the required height is
reached. Reposition the fixed deck to he required platform height and fit a trapdoor deck alongside it as shown in Step 7. Fit the guardrails as shown in Step 7.

DISMANTLING PROCEDURE

To take down the tower, reverse the building sequence. When removing guardrail braces, unlock the claws furthest from the trapdoor and then return immediately to the protected position within the trapdoor. You may then unlock the claws at the other ends of the guardrails to remove them from the tower.
